All-In-One Epic-Cash Mining Package

Package requirements:

1. Windows 8/10 64bit

Minimum mining requirements:

1. CPU: 2 cores
2. RAM: 2GB for each core
3. GPU: 3GB VRAM
4. HDD: 2GB space

Package content:

1. epic.exe from epic.tech/downloads
2. epic-wallet.exe from epic.tech/downloads
3. epic-miner-cpu.exe from epic.tech/downloads
4. epic-miner-gpu.exe from epic.tech/downloads
5. epic-tools.exe from github.com/EpicCash
6. pre-installed blockchain data updated 05/08/2021

How to use:

1. Unpack Start mining BETA.zip file (can be anywhere)
2. Run Start mining BETA.exe file

Current limitations:

- Some antiviruses will throw warnings with this package as it is related to mining and written in Python - a popular language for hackers ;)
- Works only with stock epic-miner.exe
- CPU mining can be manually improved
- No Cuckoo/ASIC algorithm available

Beginners guide:

When running for the first time user have to create wallet protected by password

After wallet creation there is 24 word seed phrase shown - THIS IS THE ONLY TIME AND NEEDS TO BE SAVED SOMEWHERE ELSE IDEALLY NON DIGITAL FORM. This seed phrase is the key to access and manage the user's wallet, keep it safe.

Now you have full access to that wallet :D

Now user have access to basic mining dashboard

Once mining is started there will be a couple CMD windows running on the machine.

1. Epic-Cash Server:

If 'current status' is different than 'Running' it means server is synchronizing with blockchain

2. CPU and/or GPU mining software:

Troubleshooting

24h Telegram support at: https://t.me/epiccashhelpdesk

- epic.exe window is black, not working
  Go to epic-server.log file in epic-tools-beta\epic-server\
  Look for error feedback at the end of the file and share
  with us on telegram

- epic-miner.exe is not connecting or not working
  Go to epic-miner.log file in epic-tools-beta\epic-miner-cpu\
  or epic-tools-beta\epic-miner-gpu directory
  Look for error feedback at the end of the file and share
  with us on telegram

- epic-wallet.exe is not working, listener is offline
  Go to epic-wallet.log file in epic-tools-beta\epic-wallet
  Look for error feedback at the end of the file and share
  with us on telegram
